\*\* Not available on factory-applied prime units.

Wood is a product of nature and will vary in colour, texture and grain. The wood options shown above are to demonstrate the approximate look of each species only. The photos are not intended to reflect a product's interior or exterior profile.

## MARVIN CLEAR COAT FINISH

# BEGIN WITH THE IDEAL FINISH

### FINISHED FROM THE START

With Marvin's optional factory-applied clear coat every piece of

Every wood shaped window that Marvin produces is put through a four step process 4-step, wherein the wood is conditioned, clear coated, sanded and baked in an oven before being put into assembly.

Integrated conditioning and process is repeated for the ideal, natural-looking finish.

Marvin products are available with chain of custody certification for either SFI® certified wood or FSC® certified wood.

All species are available FSC-certified, including tropical hardwoods Cedro Macho and Mahogany. All species except tropical hardwoods are available SFI-certified.

The appearance of wood changes, often darkening, over time. Natural wood varies in colour, texture and grain. Depicted wood species are for illustration purposes only. Contact Marvin Architectural for a sample in the species of your choice with Marvin clear interior finish.

## JAMB EXTENSIONS

To aid with installation and create a seamless wood interior, Marvin offers factory-applied jamb extensions. Jamb extensions increase the depth of the window to accommodate the thickness of the wall.

4 9/16" (116 mm) jambs are standard except where noted.

Jamb extensions for doors are available up to 9 9/16" (243 mm), and for windows up to 14" (355.6 mm).

Larger custom jamb extensions are also available through Marvin.

## PROFILE OPTIONS

Square Profile

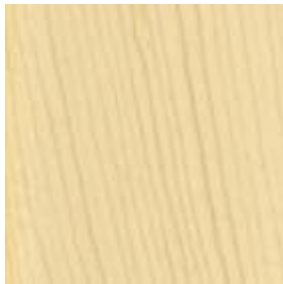

Ovolo Profile

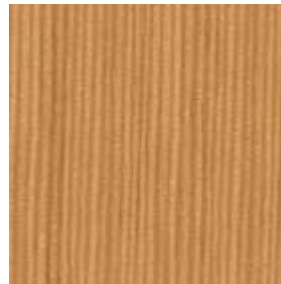

Ogee Profile

The interior edge detail where glazing meets wood is called sticking, sometimes referenced as bead. While ovolo sticking is usually featured, square sticking can be specified for a clean, crisp, more contemporary look. Simulated divided lite bars in products with square sticking echo the design and share square profiles.
